

CRABGRASS & GARDEN WEED PREVENTION

FL Crabgrass Preventer & Lawn Food: contains Team, to prevent crabgrass from germinating. 20-0-3 with trace elements. Use in early spring, around late February to mid March for good control. This product will not kill crabgrass that has already emerged. If you use this product, you need to wait at least 6-8 wks before reseeding or overseeding.

FL Lawn Food + Crabgrass & Weed Preventer: contains Barricade, to control grassy and broadleaf weeds in the lawn. 16-0-8. It will not kill crabgrass or weeds that have already emerged. Can be used year round. If you use this product, wait approximately 4 months before reseeding or overseeding.

HY Turf & Ornamental Weed & Grass Stopper: contains Dimension for control of crabgrass and many other annual grassy & broadleaf weeds in landscape areas, established lawns & ornamental turf. Has some effect on newly emerged crabgrass. Can be used any time of year.

American Weed & Grass Stopper: contains Treflan for pre-emergent control of weeds & grass in flower beds, around trees, shrubs & certain vegetables. Contains the same chemical as Preen, but for a much cheaper price!
