

# INVASIVE AGGRESSIVE PLANTS

Invasive and aggressive plants are usually non-native plants that have been introduced into an area outside of their usual environment. Most of the plants on this list can be found in various places around Richmond. Some have actually been outlawed from sale. Invasive plants can kill and choke out more beneficial native plants, and other cultivars. Make it a habit to not plant these, and to remove them if you do see them.

WISTERIA  
LIZARDS TAIL (SAURURUS)  
HOUTUYNIA CORDATA
