

YEAR-LONG LAWN CARE

Follow these easy steps for a beautiful lawn all year long!

FEBRUARY/MARCH:

Apply **FL Crabgrass Preventer + Lawn Food** for effective crabgrass control before the warm season starts. Use **FL All Seasons Lawn Food + Barricade** to eliminate broadleaf weeds in your lawn, before they start to pop up. *If you use the **Crabgrass Preventer**, you need to wait at least 6-8 weeks before reseeding or overseeding. If you use **Barricade**, wait approx. 4 months. Use **Scotts Step 1 for Seeding** if you want to reseed immediately.*

MAY/JUNE:

Use **FL Weed Out + Lawn Fertilizer** to kill most broadleaf weeds that invade lawns. If you prefer to use a liquid weed killer, we recommend **FL Weed Out Plus**, available in both a concentrate or ready to use. **Weed Out Plus** liquid will kill both broadleaf weeds AND actively growing crabgrass, without adding extra fertilizer to your grass.

JUNE/JULY:

If you've been invaded by brown patch, apply **FL Liquid Systemic Fungicide** once a month throughout the summer, to prevent and control brown patch and other fungus problems. If you'd rather use a dry product in your spreader, try **FL F-Stop**. To control moss in your lawn, use **FL Classic Lawn Food + Moss Control**. It can be used any time of the year, but is particularly effective during the spring and summer.

SEPTEMBER thru NOVEMBER:

FL Winterizer will strengthen your grass and make it more cold hardy, when you apply it in October and November. If you overseed or reseed in the fall, use **FL New Lawn Starter** to get the seed off to a healthy, hardy start. Refer to the "**Fall Lawn Renovation**" sheet for more info.

—Keep in mind that this outline will work for most people in the Richmond area. Everyone's yard is different. The recommendations above are for people who have turf-type tall fescue lawns. If you have a warm season grass such as zoysia, you'll need different instructions.
